PatientEDU, LLC and Medical Information Technology, Inc. (MEDITECH) Announce "Interactive Patient Education Solution ('IPES')" Available to MEDITECH Customers in 2010

EAST LONGMEADOW, Mass., 1.25.2010 - PatientEDU, a healthcare IT firm recognized industry-wide for "best in class" patient education content and software products, has entered into a non-exclusive agreement with Medical Information Technology, Inc. (MEDITECH) that will result in PatientEDU's "Interactive Patient Education Solution" ('IPES') being accessed from MEDITECH's Health Care Information System (HCIS). This collaborative solution will be available during 2010.

Larry O'Toole, Manager of Business Relations for MEDITECH, sees the PatientEDU 'IPES' as an ideal compliment to MEDITECH's industry-leading EMR products. "We're excited to collaborate with PatientEDU," says O'Toole. "Access to the 'IPES' solution within our Health Care Information System (HCIS) allows clinicians to engage patients throughout the care process, which is a key component toward demonstrating Meaningful Use."

PatientEDU's educational programs are interactive tutorials that include live action, 3D imagery, and opportunities for question-and-answer periods between patients and their healthcare team, including physicians and nurses. Patient access and results are recorded and retained - in a HIPAA-compliant manner - providing benefits in continuity of care, improved outcomes, reduced costs, reduced risk as well as meeting facility compliance and reporting requirements.

Steven Graziano, president of PatientEDU, said the need for the firm's programs has been growing due to several factors, including basic demands in education of patients as required by the Joint Commission, reducing readmissions with full documentation, etc.

"The PatientEDU 'IPES' program succeeds on several levels," says Graziano. "Our product improves patient outcomes while increasing nurses' efficiency, allowing them more time for clinical services. The hospitals benefit by limiting their liability, improving financial performance, increasing patient satisfaction, and retaining their retention of healthcare professionals. Additionally, the back-end component is customizable to appropriately reflect patient discharge instruction and information policies as well as informed consent policies of the specific facility. We see this strategic agreement with MEDITECH, a leading provider of EMR products, as a strong endorsement of the PatientEDU 'IPES' and a strong opportunity for both entities to bring additional improvement to facility performance in terms of patient outcome, patient satisfaction, and the hospital's financial performance."
